Annotation This casebook for students, clinicians, and related professionals presents a selection of real clinical vignettes which illustrate the concepts and terminology found in the DSM-IV-TR. These accounts have been edited to focus on information relevant to differential diagnosis. The cases are organized into sections on adults, children and adolescents, multiaxial assessment, international cases, and historical cases. They are also indexed by diagnosis and by special interest (i.e. in the medical setting). Each case is followed by a discussion of the DSM-IV-TR differential diagnosis. The editors are with the psychiatry department at Columbia University. Annotation c. Book News, Inc., Portland, OR (booknews.com).

In this new edition, completely updated for DSM-IV-TR, the authors transform their professional experience into clear, concise, practical, and learnable skills. They teach how to master each of the four basic interview components separately, and how to make them interact optimally during the five phases of the patient interview. Also included is an example of a write-up of a psychiatric evaluation that will satisfy most third-party payers, taking the reader through the write-up step by step and showing how it can be adapted to virtually any procedural or research need. Changes to this edition: • Addition of discussion of violence and duty to warn• Expansion of attention problems, suicide intent, and comorbidities of personality disorders• Addition of formal assessments of executive functions and of dementia (in appendix) As with the previous edition, The Clinical Interview Using DSM-IV-TR presents a unique vision of how to use the most powerful assessment strategies developed in the field of clinical psychology and psychiatry.
