W=Fd(cos q) To calculate the width,y, recall that the perimeter of an area equals the sum of twice its width and twice its length. d= 2x+ 2y. Rearrange the equations to solve for dand y. Note that the force is applied in the direction of the displacement, so q = 0°. d = .

Because the force is in the same direction as the cart's displacement (q = 0°), the net work is simply the product of the net force and the distance the cart is pushed. The net work can also be explained in terms of changing kinetic energy by using the work-kinetic energy theorem. Wnet=Fnetd(cos q) =Fnetd Wnet=ΔKE=KEf−KEi=□ 1 2 □mvf
