!New Dark Age is among the most unsettling and illuminating books I've read about the Internet, which is to say that it is among the most unsettling and illuminating books I've read about contemporary life.!! New Yorker As the world around us increases in technological complexity, our understanding of it diminishes. Underlying this trend is a single idea: the belief that our existence is understandable through computation, and more data is enough to help us build a better world. In reality, we are lost in a sea of information, increasingly divided by fundamentalism, simplistic narratives, conspiracy theories, and post-factual politics. Meanwhile, those in power use our lack of understanding to further their own interests. Despite the apparent accessibility of information, we're living in a new Dark Age. From rogue financial systems to shopping algorithms, from artificial intelligence to state secrecy, we no longer understand how our world is governed or presented to us. The media is filled with unverifiable speculation, much of it generated by anonymous software, while companies dominate their employees through surveillance and the threat of automation. In his brilliant new work, leading artist and writer James Bridle surveys the history of art, technology, and information systems, and reveals the dark clouds that gather over our dreams of the digital sublime.

We live in times of increasing inscrutability. Our news feeds are filled with unverified, unverifiable speculation, much of it automatically generated by anonymous software. As a result, we no longer understand what is happening around us. Underlying all of these trends is a single idea: the belief that quantitative data can provide a coherent model of the world, and the efficacy of computable information to provide us with ways of acting within it. Yet the sheer volume of information available to us today reveals less than we hope. Rather, it heralds a new Dark Age: a world of ever-increasing incomprehension. In his brilliant new work, leading artist and writer James Bridle offers us a warning against the future in which the contemporary promise of a new technologically assisted Enlightenment may just deliver its opposite: an age of complex uncertainty, predictive algorithms, surveillance, and the hollowing out of empathy. Surveying the history of art, technology and information systems he reveals the dark clouds that gather over discussions of the digital sublime.

In this indispensable book, urban visionary Jane Jacobs argues that as agrarianism gives way to a technology-based future, we're at risk of cultural collapse. Jacobs/renowned author of The Death and Life of Great American Cities and The Economy of Cities/ pinpoints five pillars of our culture that are in serious decay: community and family; higher education; the effective practice of science; taxation, and government; and the self-regulation of the learned professions. The corrosion of these pillars, Jacobs argues, is linked to societal ills such as environmental crisis, racism, and the growing gulf between rich and poor. But this is a hopeful book as well as a warning. Drawing on a vast frame of reference/ from fifteenth-century Chinese shipbuilding to Ireland's cultural rebirth/ Jacobs suggests how the cycles of decay can be arrested and our way of life renewed. Imigrating and accessible, Dark Age Ahead is not only the crowning achievement of Jane Jacobs' career, but one of the most important works of our time.

NEW YORK TIMES BESTSELLER !! The bestselling author of Morning Star returns to the Red Rising universe with the thrilling sequel to Iron Gold. !Brown's plots are like a depth charge of nitromethane dropped in a bucket of gasoline. His pacing is 100% him standing over it all with a lit match and a smile, waiting for us to dare him to drop it.!!NPR (Best Books of the Year) He broke the chains. Then he broke the world! A decade ago Darrow led a revolution, and laid the foundations for a new world. Now he's an outlaw. Cast out of the very Republic he founded, with half his fleet destroyed, he wages a rogue war on Mercury. Outnumbered and outgunned, is he still the hero who broke the chains? Or will he become the very evil he fought to destroy? In his darkening shadow, a new hero rises. Lysander au Lune, the displaced heir to the old empire, has returned to bridge the divide between the Golds of the Rim and Core. If united, their combined might may prove fatal to the fledgling Republic. On Luna, the embattled Sovereign of the Republic, Virginia au Augustus, fights to preserve her precious democracy and her exiled husband. But one may cost her the other, and her son is not yet returned. Abducted by enemy agents, Pax au Augustus must trust in a Gray thief, Ephraim, for his salvation. Far across the void, Lyria, a Red refugee accused of treason, makes a desperate bid for freedom with the help of two unlikely new allies. Fear dims the hopes of the Rising, and as power is seized, lost, and reclaimed, the worlds spin on and on toward a new Dark Age. Don't miss any of Pierce Brown's Red Rising Saga: RED RISING !! GOLDEN SON !! MORNING STAR !! IRON GOLD !! DARK AGE

Why the prejudice against adopting a scientific attitude in the social sciences is creating a new 'Dark Ages' and preventing us from solving the perennial problems of crime, war, and poverty. During the Dark Ages, the progress of Western civilization virtually stopped. The knowledge gained by the scholars of the classical age was lost; for nearly 600 years, life was governed by superstitions and fears fueled by ignorance. In this outspoken and forthright book, Lee McIntyre argues that today we are in a new Dark Age:that we are as ignorant of the causes of human behavior as people centuries ago were of the causes of such natural phenomena as disease, famine, and eclipses. We are no further along in our understanding of what causes war, crime, and poverty/and how to end them/than our ancestors. We need, McIntyre says, another scientific revolution; we need the courage to apply a more rigorous methodology to human behavior, to go where the empirical evidence leads us/even if it threatens our cherished religious or political beliefs about human autonomy, race, class, and gender. Resistance to knowledge has always arisen against scientific advance. Today's academics/economists, psychologists, philosophers, and others in the social sciences/stand in the way of a science of human behavior just as clerics attempted to block the Copernican revolution in the 1600s. A scientific approach to social science would test hypotheses against the evidence rather than find and use evidence only to affirm a particular theory, as is often the practice in today's social sciences. Drawing lessons from Galileo's conflict with the Catholic church and current debates over the teaching of "creation science," McIntyre argues that what we need most to establish a science of human behavior is the scientific attitude:the willingness to hear what the evidence tells us even if it clashes with religious or political pieties;and the resolve to apply our findings to the creation of a better society.

The climate futurist presents a sobering analysis of America's future in the face of climate change/and how we can prepare to make the most of it. After decades of missed opportunities, the door to a sustainable future has closed, and the future we face now is one in which today's industrial civilization unravels in the face of uncontrolled climate change and resource depletion. What is the world going to look like when all these changes have run their course? John Michael Greer seeks to answer this question, using a clear-eyed analysis of ecology, economics, and history to discern what the next 500 years or so might look like. As globalization ends, the United States/and Western civilization/will enter the stages of decline and fall. Though Dark Age America offers an uncompromising assessment of our collective future, it is by no means without hope. Knowing where we're headed is a crucial step in responding to the challenges of the future and doing what we can now to help our descendants make the most of the world we're leaving them.

'Indiscentlyly original, deeply disorientating and yet somehow radically hopeful' ... worth reading and rereading' Brian Eno 'Be prepared to re-evaluate your relationship with the amazing life forms with whom we share the planet. Fascinating, innovative and thought provoking; I thoroughly recommend Ways of Being' Dr Jane Goodall, DBE. Founder of the Jane Goodall Institute and UN Messenger of Peace 'Wonderful ... will make you feel and think the power of knowing how like all other lifeforms we are. There is nothing more important' Timothy Morton Recent years have seen rapid advances in 'artificial' intelligence, which increasingly appears to be something stranger than we ever imagined. At the same time, we are becoming more aware of the other intelligences which have been with us all along, unrecognized. These other beings are the animals, plants, and natural systems that surround us, and are slowly revealing their complexity and knowledge - just as the new technologies we've built are threatening to cause their extinction, and ours. In Ways of Being, writer and artist James Bridle considers the fascinating, uncanny and multiple ways of existing on earth. What can we learn from these other forms of intelligence and personhood, and how can we change our societies to live more equitably with one another and the non-human world? From Greek oracles to octopuses, forests to satellites, Bridle tells a radical new story about ecology, technology and intelligence. We must, they argue, expand our definition of these terms to build a meaningful and free relationship with the non-human, one based on solidarity and cognitive diversity. We have so much to learn, and many worlds to gain.' Brilliant ... Bridle shows the importance of listening to one another and our surroundings, and of creating new forms of community' Hans Ulrich Obrist

A field manual to the technologies that are transforming our lives Everywhere we turn, a startling new device promises to transfigure our lives. But at what cost? In this urgent and revelatory excavation of our Information Age, leading technology thinker Adam Greenfield forces us to reconsider our relationship with the networked objects, services and spaces that define us. It is time to re-evaluate the Silicon Valley consensus determining the future. We already depend on the smartphone to navigate every aspect of our existence. We're told that innovations/ from augmented-reality interfaces and virtual assistants to autonomous delivery drones and self-driving cars/ will make life easier, more convenient and more productive. 3D printing promises unprecedented control over the form and distribution of matter, while the blockchain stands to revolutionize everything from the recording and exchange of value to the way we organize the mundane realities of the day to day. And, all the while, fiendishly-complex algorithms are operating quietly in the background, reshaping the economy, transforming the fundamental terms of our politics and even redefining what it means to be human. Having successfully colonized everyday life, these radical technologies are now conditioning the choices available to us in the years to come. How do they work? What challenges do they present to us, as individuals and societies? Who benefits from their adoption? In answering these questions, Greenfield's timely guide clarifies the scale and nature of the crisis we now confront /and offers ways to reclaim our stake in the future.
