With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of development thought and practice.

Outstanding representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of

What is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future 'development economics' is to be regarded simply as applied economics or whether the nature and scope of development economics will constitute a need for a special development theory to supplement general economic theory. 'Frontiers of Development Economics' is an ideal reference for all those working in the international development community.

**Sustainable Development.** They are not just about disparities in income and wealth. They cannot be accounted for simply by using summary measures of inequality that focus on a single dimension. And they will shape the prospects of people that may live to see the 22nd century. The 2019 Report explores inequalities in human development by going beyond income, beyond averages and beyond today. Anthony Giddens has been in the forefront of developments in social theory for the past decade. In *The Constitution of Society* he outlines the distinctive position he has evolved during that period and offers a full statement of a major new perspective in social thought, a synthesis and elaboration of ideas touched on in

previous works but described here for the first time in an integrated and comprehensive form. A particular feature is Giddens's concern to connect abstract problems of theory to an interpretation of the nature of empirical method in the social sciences. In presenting his own ideas, Giddens mounts a critical attack on some of the more orthodox sociological views. The Constitution of Society is an invaluable reference book for all those concerned with the basic issues in contemporary social theory.

First published in 1962, *The Theory of Economic Integration* provides an excellent exposition of a complex and far-reaching topic. Professor Balassa has been remarkably successful in covering so much ground with such care and balance, in a treatment which is neither in any way abstruse nor unnecessarily technical. His book will interest economists in Europe by reason of its subject and treatment, but it is also a valuable and reliable textbook for students tackling integration as part of a course of International

**Economics** and for those studying Public Finance. He distinguishes between the various forms of integration (free trade area, customs union, common market, economics union, and total integration). In addition, he applies the theoretical principles to current projects such as the European Common Market and Free Trade Area, and to Latin American integration projects. In offering this theoretical study, the author builds on the conclusions of other writers, but goes beyond this in providing a unifying framework for previous contributions and in exploring questions that in the past received little attention – in particular, the relationship between economic integration
