From reviews: "Histological and Histochemical Methods is a tour de force wholly suited to the modern age of histology and Professor Kiernan has triumphed again. To cover so much ground clearly and concisely while including the justification of the underlying chemistry makes this book unique. There should not be a histology laboratory or an undergraduate library that does not own a copy." *Biotechnic & Histochemistry* 2016, 91(2): 145. "This book should be present on the bookshelves of every research or analysis laboratory where histology and histochemistry are routinely used, as an essential reference source of basic and practical information for scientists and technicians." *European Journal of Histochemistry* 2016, vol. 60. Histotechnology and histomorphometry are the major methodologies in bone and cartilage-related research. Handbook of Histology Methods for Bone and Cartilage is an outgrowth of the editors' own quest for information on bone and cartilage histology and histomorphometry. It is designed to be an experimental guide for personnel who work in the areas of basic and clinical bone and cartilage, orthopedic, or dental research. It is the first inclusive and organized reference book on histological and histomorphometrical techniques on bone and cartilage specimens. The topic has not previously been covered

adequately by any existing books in the field. Handbook of Histology Methods for Bone and Cartilage has six major parts and is designed to be concise as well as inclusive, and more practical than theoretical. The text is simple and straightforward. Large numbers of tables, line drawings, and micro- or macro-photographs, are used to help readers better understand the content. Full bibliographies at the end of each chapter guide readers to more detailed information. A book of this length cannot discuss every method for bone and cartilage histology that has been used over the years, but it is hoped that major methods and their applications have been included.
